Air Conditioning Disclosure Statement
St. Joseph's Long-Term Care Facility

As per the Fixing Long-Term Care Act and Regulations, 2021, Section 271, St. Joseph's Lifecare Centre Brantford (SJLCB) discloses that all long-term care resident rooms have central air conditioning.

The SJLCB facility uses a Trane Automated HVAC system to track all building temperatures in resident rooms and common areas of the long-term care home. All long-term care areas have a thermometer to monitor temperatures throughout the day. All areas are maintained between 22 and 26 degrees Celsius. In the event that any area reaches a temperature outside of the prescribed range, this is immediately reported to the maintenance department which is available during regular hours and after hours for immediate actions.

We encourage you to reach out to our team if you have additional questions regarding our facility air conditioning systems.

Submitted on behalf of St. Joseph's Lifecare Centre Brantford.
